**ACID ETCHING**

Etched Only

Etched with Infill

## ABOUT T-ETCH

March 2015

Trimco's T-Etch is a special acid etching process that produces a high definition graphic with slight texturing. Logo's and images can be etched into protection plates, push plates, pull plates and signage to showcase your brand. These products are manufactured in the United States from stainless steel, bronze, brass, aluminum and copper. Color infill is also available to highlight and accentuate the design.

### FEATURES

- Acid etching process, with optional color infill.
- Manufactured in the United States.
- Heavy duty .050" stainless steel, brass or bronze material standard.
- Sizes up to 4' x 8'.
- Pencil beveled on all four sides standard.
- Custom cutouts, sizes and shapes available.
- Easily cleaned with mild soap and water.

### APPLICATIONS

- Sporting complexes
- Corporate offices
- Education
- Retail
- Hospitality
- Restaurants

- Prices are list adders and should be combined with the list price for the standard product.
- Logo release form must be submitted with .AI or .EPS file including PMS colors.
